Consumable items

The drum unit and toner cartridge are two separate consumables. Make sure both are installed as an assembly. For more information on how to replace the consumable items, see the instructions included with the drum unit for replacing the drum unit or see the instructions listed on the box of the toner cartridge for replacing the toner cartridge.

Toner cartridge	Drum unit
Model Name: TN-1035	Model Name: DR-1035
	

IMPORTANT

- Brother machines are designed to work with toner of a particular specification and will work to a level of optimum performance when used with Brother Original toner cartridges. Brother cannot guarantee this optimum performance if toner or toner cartridges of other specifications are used. The machine may not detect toner or toner cartridges of other specifications correctly but may instead detect such items as standard yield toner cartridges. Brother does not therefore recommend the use of cartridges other than Brother Original cartridges with this machine, or the refilling of empty cartridges with toner from other sources. If damage is caused to the drum unit or other parts of this machine as a result of the use of toner or toner cartridges other than Brother Original products due to the incompatibility or lack of suitability of those products with this machine, any repairs required as a result may not be covered by the warranty.
- For best performance, use Brother Original drum and toner units. Printing with a third party drum unit or toner unit may reduce not only the print quality but also the quality and life of the machine itself. Warranty coverage may not apply to problems caused by the use of a third party drum or toner unit.

NOTE

- Discard used consumable items according to local regulations, keeping it separate from domestic waste. If you have questions, call your local waste disposal office. Be sure to reseal the consumable items tightly so that the material inside does not spill.
- The projected life for each of the toner cartridges is based on ISO/IEC 19752. Frequency of replacement will vary depending on the complexity of printed pages, percentage of coverage and type of media used.

Identifying your problem

First, check the following:

- **The machine's power cord is connected correctly and the machine is turned on.**
- **All of the protective parts have been removed.**
- **Paper is inserted correctly in the paper tray.**
- **The interface cables are securely connected to the machine and the computer.**

If you did not solve your problem with the above checks, identify your problem and then go to the page suggested below:

Telephone and Fax problems (MFC-1816 and MFC-1819) on page 59

Improving the print quality on page 61

If the machine is connected to a PC, depending on the error, a Popup application may appear on the PC.

Follow the instructions on the screen to resolve the error.

If you are having difficulty with your machine

Most problems can be easily resolved by yourself. If you need additional help, the Brother Solutions Center offers the latest FAQs and troubleshooting tips.

Visit us at <http://solutions.brother.com/>.

Telephone and Fax problems (MFC-1816 and MFC-1819)

If you cannot send or receive a fax, check the following:

- 1 Check the machine's power cord is connected correctly and the machine is turned on.
- 2 Connect one end of the telephone line cord to the area labelled "**LINE**," and then connect the other end of the telephone line cord directly to a telephone wall socket.

If you can send and receive faxes when the telephone line is directly connected to the fax, the problem may be unrelated to the machine. Please contact your service provider for connection issues.

- 3 Check the receive mode.

For more information on setting the Receive mode, see *Fax Receive modes* on page 38.

4 Change the compatibility setting to `Basic (for VoIP)`.

You may be able to send and receive faxes by lowering the connection speed.

- 1 Press **Menu**, **2**, **0**, **1**.
- 2 Press **▲** or **▼** to choose `Basic (for VoIP)`.
- 3 Press **OK**.
- 4 Press **Stop/Exit**.

If the problem is still not resolved after trying all of the above, turn the machine off, and then turn it on.

If you still cannot send or receive faxes after trying all of the above, check the FAQ on the Brother Solutions Center website (<http://solutions.brother.com/>).

Troubleshooting for other problems

Question	Answer
Cannot receive a fax.	If you have a dedicated fax line and want your Brother machine to automatically answer all incoming faxes, you should choose <code>Fax Auto</code> .
Can I set the machine not to print the Transmission Verification report?	This product will print a Transmission Verification report. Even if the Transmission Verification report is set to <code>Off</code> , a report is printed when there is a communication error. If the <code>Journal Period</code> is set to <code>Off</code> , <code>Fax Journal</code> are not printed.
Can I cancel the fax job?	Press Stop/Exit to cancel the fax, or press Menu 2, 7 to cancel the remaining jobs.
Poor sending quality.	Try changing your resolution to <code>Fine</code> or <code>S.Fine</code> , or clean the scanner.
Sent faxes are blank.	Make sure you are loading the document correctly. The document should be face down when using the ADF or the scanner glass. See <i>Loading documents</i> on page 34.
Vertical black lines when sending.	Black vertical lines on faxes you send are typically caused by dirt or correction fluid on the glass strip. See <i>Clean the inside of the machine.</i> on page 62.

Improving the print quality

NOTE

Brother does not recommend the use of cartridges other than Brother Original cartridges or the refilling of used cartridges with toner from other sources.

If you are having problems with print results, check the following:

1 The machine's environment.

Choose a location where the temperature remains between 10°C and 32.5°C and the humidity is between 20% to 80% (without condensation).

2 Acceptable paper is loaded in the paper tray.

See *Acceptable paper* on page 32

3 The paper is loaded correctly in the machine.

Turning the paper over may help paper loading become smoother.

Adjusting the guide may help paper loading become smoother.

4 Replace a toner cartridge or a drum unit.

For more information on how to replace the consumable items, see the instructions included with the drum unit for replacing the drum unit or see the instructions listed on the box of the toner cartridge for replacing the toner cartridge.

5 Clean the inside of the machine.

■ Cleaning the scanner glass

Clean the white plastic surface (1) and scanner glass (2).

(MFC-1816 and MFC-1819)

Clean the white bar (3) and the scanner glass strip (4).

■ Cleaning the corona wire

Slide the green tab from left to right and right to left several times.

NOTE

Be sure to return the tab to the home position (▲) (5). If you do not, printed pages may have a vertical stripe.

■ Clean the drum unit if black or white dots appear on printed pages

Push down the lock lever and take the toner cartridge out of the drum unit.

Turn the drum unit gear by hand while looking at the surface of the drum roller (1).

Wipe the surface of the drum gently with a dry cotton swab until the dust or glue on the surface comes off.

6 Check the printer driver settings.

Try changing the **Print Settings** in the **Basic** tab.

If the paper is curled or the toner is not fixed well on the paper, you can adjust these settings in **Improve Print Output**. Click **Other Print Options** in the **Advanced** tab.

Document Jams (MFC-1816 and MFC-1819)

Follow the steps below to handle a document jam in the ADF.

- 1 Open the ADF cover.
- 2 Pull the jammed document out.

- 3 Close the ADF cover.
- 4 Lift the document cover.
- 5 Pull the jammed document out to the right.

- 6 Insert a piece of stiff paper, such as cardstock, into the ADF to push any small paper scraps through.

If the document rips or tears, be sure you remove all small paper scraps to prevent future jams.

- 7 Close the document cover.
- 8 Press **Stop/Exit**.

Paper Jams

Always remove all paper from the paper tray and straighten the stack when you add new paper. This helps prevent multiple sheets of paper from feeding through the machine at one time and prevents paper jams.

- 1 Turn the machine off.
- 2 Wait at least 15 minutes for the product to cool down before you touch the internal parts of the product.
- 3 Remove all paper loaded in the tray.
- 4 Use both hands to slowly pull out the jammed paper.

- 5 Open the scanner cover. The pull-arm (1) on the left side of the machine will lock. Open the top cover.

- 6 Slowly take out the drum unit and toner cartridge assembly.

WARNING

HOT SURFACE

- 7** Push down the lock lever and take the toner cartridge out of the drum unit. Remove the jammed paper if there is any inside the drum unit.

- 8** Put the toner cartridge back into the drum unit until the lock lever lifts automatically.

- 9** Place the drum unit and toner cartridge assembly back in to the machine.
- 10** Close the top cover.
After lifting the scanner cover slightly, pull the pull-arm (1) on the left side of the machine down, and then close the scanner cover using both hands.

- 11** Load the paper back in to the tray. Make sure that the paper is below the protruding section of the rear guide. Slide the paper guides to fit the paper size. Make sure that the guides are firmly in the slots.
- 12** Turn the machine on.

Cleaning and Checking the machine

Make sure to read the guidelines in the Product Safety Guide before cleaning the machine.

Clean the outside and inside of the machine regularly with a dry, lint-free cloth. When you replace the toner cartridge or the drum unit, make sure that you clean the inside of the machine. If printed pages are stained with toner, clean the inside of the machine with a dry, lint-free cloth.

WARNING

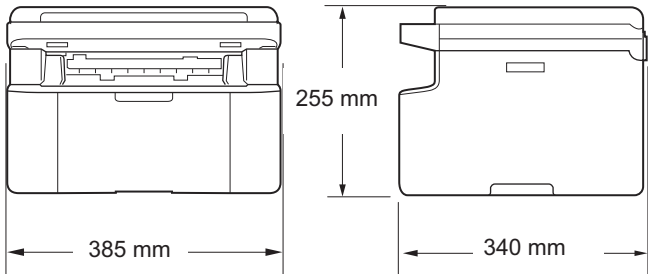

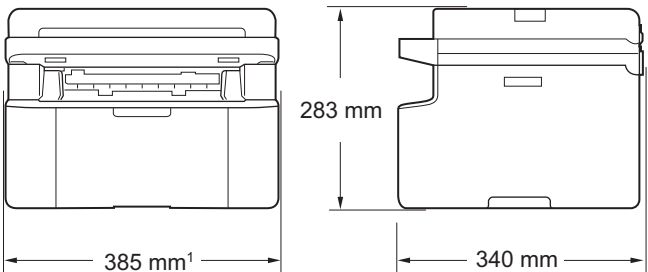

DO NOT use flammable substances, any type of spray, or an organic solvent/liquid containing alcohol or ammonia to clean the inside or outside of the product. Doing so could cause a fire or electrical shock. Instead, use only a dry, lint-free cloth.
